Subject: Irrigated Growers Southern Alberta

Hello,

We are working along with AAFC, University of Lethbridge and Lethbridge Polytecnic for a Masters project to establish irrigation standards for mustard seed production. The focus in AB would be yellow mustard which is 70% of the market and due to canola seed production in the area as it cannot cross pollinate. Saskatchewan will focus on Brown, and Oriental Mustard.

We are trying to find resources to contact local producers that might be interested in being part of the three year research trial for field scale plots. Trails will also be completed on small plots at AAFC.

Thank you for any insight you maybe able to provide.
